

NEON & LED SIGN MATERIALS

NEON GLASS TUBING—Neon Signs

A neon sign is a cold cathode fluorescent lamp (CCFL). A typical neon sign is composed of glass tubes containing neon gas and a small amount of argon gas. Although neon is used to describe signs of different colors, neon does not produce every color. For example, a yellow “neon” sign is made with helium, not neon. Red neon signs, on the other hand, are created with neon gas. Neon signs are commonly used as accent lighting, to enhance building features or to draw attention to a product or service.

LED SIGNS

They are known by many different names - electronic message centers, digital displays, reader boards or electronic signs, just to name a few. Whatever you call them, it is our mission to help you feel confident and educated before you buy. Double sided, single face, wall-mount or monument, an outdoor digital sign can make a huge impact on your business signage. An LED sign is a technical product but choosing a manufacturer and sign company partner is not a tough task if you do a bit of research first. An LED (light emitting diode) is an efficient, effective, and ultra-bright alternative to incandescent light bulbs. Unlike traditional light bulbs, LEDs do not burn out because there is no filament.

LED FLEX SIGNS—Lumiflex

Our flexible LED and simulated neon product, LumiFlex, is bendable and easy to manipulate in the field. Simulating neon channel letters and contouring to architectural features are just some of the solutions this product offers. LumiFlex has a side-to-side bending orientation which is perfect for bordering signs. Additionally, at IP68 it is suitable for indoor and outdoor use. ***does not bend around corners**

LED PROGRAMMABLE SIGNS

Whether it is small or large, indoor, or outdoor, scrolling or a full digital display you may be wondering what type of information to share on your programmable LED signs. Since you can rotate between a variety of signs and program your sign rotation for the time of day and day of the week—it is time to get creative. Yes, you can display the same signs round the clock but to make the most of your investment, it is better to switch things up!
